VITAE SUITE

NEXT GENERATION OF IT SOLUTIONS FOR THE SOCIAL, HEALTH AND CARE SECTORS

CSC VITAE SUITE

The three solutions CSC Social, CSC Health and CSC Care have been developed to stand alone as complete and independent solutions in their respective fields. At the same time, the solutions are part of VITAE Suite, which opens new perspectives for the use of IT in the three sectors.

VITAE Suite gives a total, cross-disciplinary IT support of, for example:

- master data
- medicine
- security
- user control
- communication

This gives a pronounced simplified use of IT systems in the social, health and care sectors. It also strengthens the collaboration of staff across departments and professional groups, on administration as well as staff level.

VITAE Suite is the only solution on the market to support a coherent, coordinated engagement in the individual citizen. With VITAE Suite you can work according to the motto "one citizen - one record" across the three sectors - with the necessary control of security and access.

Management information and reporting can be made within the individual sectors, and with the VITAE Suites Business Intelligence solution (VITAE BI) you can extract information across the sectors. In this way you obtain a coherent and uniform picture of the whole social and health area, with a basis for common, secure and efficient control and quality development.

With VITAE Suite you can define and continuously adjust the IT workspace of the individual staff member so that it supports the daily work.

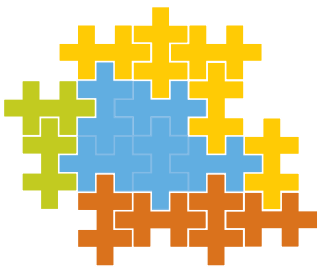

The solution contains role-based security which supports extremely high demands for authorization and logging.

Today VITAE Suite is used for documentation and management of home nursing, training, preventive measures, home care, nursing homes and social security. It is an advanced and well-tested solution for administrators and staff in the social, health and care sector.

VITAE Suite offers the following key possibilities:

- configuration
- targeted workspace for the individual staff member
- wide use of structured data
- integration by means of open standards

All in all a very flexible solution.

VITAE SUITE INTEGRATES WITH A WIDE RANGE OF EXTERNAL SYSTEMS. THIS MINIMIZES THE NEED FOR RE-TYPING AND UPDATING AND CONSEQUENTLY REDUCES THE RISK OF DATA ERRORS. BASICALLY, DATA THAT HAVE BEEN SAVED ONCE CAN BE REUSED WHEREVER RELEVANT THROUGHOUT VITAE SUITE.

VITAE RECORD

VITAE Record is a tool for documentation and communication.

With the citizen in focus VITAE Record creates the framework for a shared workspace, irrespective if the user is assessment officer, home care, rehabilitation centre, social worker or private provider. One citizen has one record.

The modules of VITAE Record contain targeted functionality within, for example:

- master data
- medicine
- case management and assignment of services
- nursing documentation
- prevention
- social action plans
- use of force
- tender management

Each module contains many options for configuration and adjustment to local organizations, classifications and the need for documentation. It is, for example, very easy to design and set up screen displays.

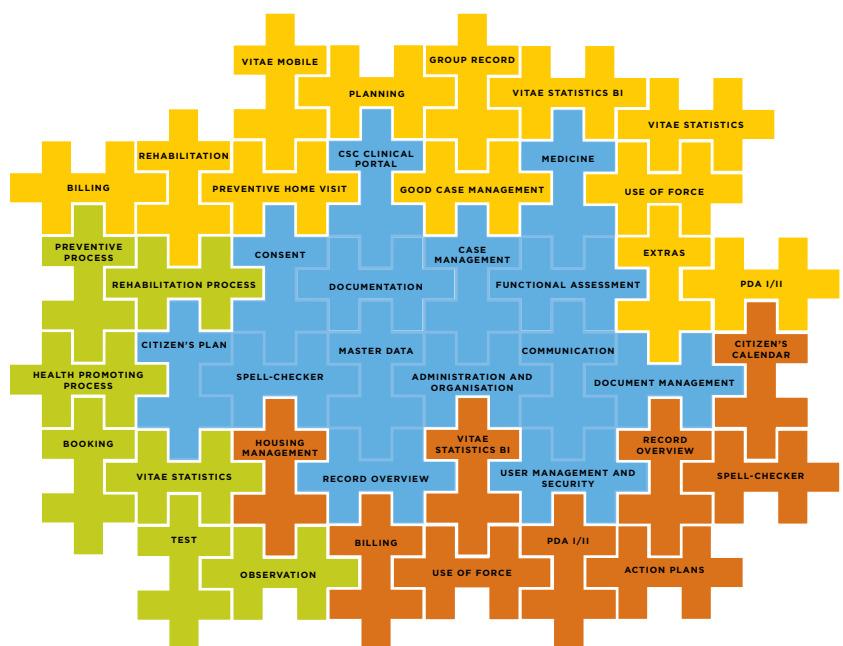

VITAE Record is a mobile solution that can be used online at the citizen's home, with full access to all records, or as an

offline solution with access to selected data. This makes it possible for the staff to look up and register changes in the record in connection with, for example, case administration and follow-up visits at the citizen's home. Furthermore, the citizen may be given access to their own data through a special web portal.

The solution includes a role-based security system that ensures management and control of authorization, access and loggings. The security system is fully integrated and enables assignment of differentiated user access. The general access control is done via user profiles defined on the basis of the function roles of the individual staff member. The security system ensures that the individual staff member gains access to only relevant information and functions in the citizen's record.

VITAE SUITE CONTAINS THE FOLLOWING PRODUCTS:

- VITAE RECORD
- VITAE BOOKING
- VITAE PLANNING
- VITAE PDA
- VITAE BI
- CSC CLINICAL PORTAL

ABOUT CSC

CSC Scandihealth is CSC's European product development centre for IT solutions for health and social services. We develop and supply electronic health records and solutions for hospital information, clinical quality, care, telemedicine, health insurance and student administration – innovative solutions that support the development of an integrated health community.

CSC Scandihealth has delivered healthcare IT since 1972 and has, over the years, built up an unrivalled range of products, a unique knowledge of the healthcare sector and in-depth insight into the world of our customers.

CSC Scandihealth is headquartered in Aarhus and is owned by CSC. Learn more at www.scandihealth.dk.

VITAE BOOKING

VITAE Booking is a calendar tool that gives a good overview of rehabilitation services. In VITAE Booking you set up localities, e.g. swimming baths and training centres, together with the individual training services, e.g. knee or hip training teams.

Together with the module Episode of Care from VITAE Record, VITAE Booking constitutes a tailored solution for the health sectors.

VITAE PLANNING

VITAE Planning gives a good overview of the resources at the assignment of the daily tasks of the care workers.

The tasks and available resources are gathered in one place, which provides a quick overview of possibilities and limitations, easing the daily planning.

VITAE PDA

VITAE PDA is a mobile solution, for example a PDA, which gives the care worker access to relevant information about the citizen before and during visits at the citizen's home. The care worker can get a quick overview of health information, means of access, current medicine, latest notes, total list of services etc. Furthermore, the care worker can easily and quickly register time usage on visit or service level. This forms the basis of correct billing and comparing assessed time with delivered time.

VITAE BI

VITAE BI (Business Intelligence) is a tool for daily management and managerial follow-up. VITAE BI strengthens budgeting, follow-up and general management. All structured data from the total solution are available in VITAE BI, which enables you to define locally what and how much to include in the general management information and in analyses of focus areas.

CSC CLINICAL PORTAL

VITAE Record is based on a portal that enables integration through open standards. The interfaces with documentation and technical descriptions are accessible to the customer as well as 3rd-party suppliers.

The portal forms the basis of coherent workspace solutions that support the user and the task. Information about the selected citizen is shared by all modules of the portal.

When another citizen is selected, all information is automatically replaced in all active modules. The modules' centrally coordinated context sharing is based on HL7's CCOW standard.

Be inspired by the possibilities that VITAE Suite has to offer in the social and health sectors. Please contact us to learn more or to get a presentation of the solution based on the specific needs of your organization.
